Dr. Thomas Schröder

Profile

Prof. Schröder has extensive experience in planning and implementing policy reform processes in the VET sector in a variety of countries. He has experience in leading, designing and implementing reform initiatives and pilot projects, on behalf of the Federal Government in Germany and governments from South East Asia and Central Asia. In addition to his technical expertise, he is characterized by his participatory and cooperative approach, which enables stakeholders from politics, business associations and other interest groups to bring their interests into the reform process and develop ownership.

Prof. Schröder possesses a vast record of managing research and development projects. In the context of a BMZ project, which was operated by GIZ, he established the Regional Association for Vocational Education and Training in Asia (RAVTE) from 2011-14. Today, RAVTE is a platform in Southeast Asia with 25 members from 10 countries that focuses equally on the interests of academia, politics and business with regard to TVET. The Online Journal for Vocational Education and Training in Asia (www.tvet-online.asia) belongs to RAVTE but is edited by Prof. Schröder. In 2016, Prof. Schröder received an honorary doctorate from Her Royal Highness Maha Chakri Sirindhorn in recognition of his reform achievements in Thailand.

As the holder of the "UNESCO Chair of TVET for competence development for the future of work", Prof. Schröder has committed his chair to making a substantial contribution to the achievement of the SDGs, i.e. also with regard to Greening TVET. During his time as a vocational school teacher and research assistant, he was in charge of implementing green teaching projects in the construction industry. He also initiated and was responsible for the issue: "The Greening of Technical and Vocational Education and Training" in TVET@Asia (Issue 6 | TVET@Asia (tvet-online.asia)). He is currently responsible for a 1 million Euro project in the chemical industry (BBChemie by the German Federal Ministry of Education) in which greening plays an important role in the qualification of company trainers and trainees. In numerous curriculum development projects, the consideration of greening is always status quo.

As a German VET expert, he represents the positions of the Dual VET system, its elements and modes of action nationally and internationally. Work-based learning is one of his key research and development areas. He started his professional career with an apprenticeship in the Dual VET system and then became a vocational school teacher in Hamburg, where he was additionally responsible for the training of teachers. He developed numerous ToT concepts in cooperation with stakeholders, most recently for in-company trainers for the Government of Georgia on behalf of the World Bank. Prof. Schröder combines the perspectives of all stakeholders in Dual VET, including the different learning venues and stakeholders.

Prof. Schröder started his career with an apprenticeship in bricklaying in the German Dual TVET system, which was followed by a study program at Hamburg University. He worked as a TVET teacher at the Vocational College for Construction at the Hamburg Institute for Vocational Education and Training (HIBB) and he was additionally involved in the education of TVET teachers, in curriculum development activities and in the development of competence-based assessment instruments. In 2005, he participated in Sri Lanka in a post-tsunami technical assistance to design short courses for skilling and up-skilling labourers from the construction sector. In 2008, he developed occupational profiles for the construction sector in Kosovo and developed equipment lists for workshops for practical training at the Centre of Competence for the Construction Sector in Skenderaj.
